 <p style="text-align: center;">Palm Centro Palm Treo Sprint Mogul</p>	 <p style="text-align: center;">Palm Treo HTC 6800</p>
Looking at one not mentioned above?	
<p>Must have large internal memory (100mb+) Must have expandable memory slot Email medpda@etsu.edu if you have questions.</p>	

Blackberry?

Blackberries are gradually becoming useful in the medical field. The only programs available are ePocrates, Dynamed, and Archimedes. A Dataplan is required.

iPhone

Apple iPhone and iTouch are new to the market. Application support is very limited at the moment. An enterprise pack will be available in July which will allow the iPhone to sync email, calendar, and contacts with Microsoft Exchange. Current programs are web-based (ePocrates, dynamed, archimedes) ePocrates will be available as a phone-based program in July. Data Plan Required.

Memory Card

Required for most medical programs... They are available at most stores ranging from \$7-\$20. For phones that require a SD card, be sure to only buy a standard SD card. **Some labeled SDHC (Secure Digital High Density) do not work with PDA's.**

What to do when you get your PDA

Bring it by the Medical Library for installation of medical programs. You can drop off your PDA anytime the library is open, and most PDA's can be done same day. Email medpda@etsu.edu in advance to schedule a service time (optional).

Products Compatible with the E*Value System

In general the product works well with:

- PALM devices that are v3.1 and higher
