MINDSET MATTERS!

Practitioner resilience in the helping professions

Dr. Bethany Novotny
Department of Counseling & Human Services
Presentation Outline

• Overview
• Key Terms
• Research Questions
• Research Design
• Results
• Conclusions
• Application
Key Terms

- **Grit**: Passion and perseverance for long-term goals (Duckworth et al., 2007)

- **Mindset**: The view you adopt for yourself that intelligence (as well as other traits) is either fixed or malleable (Dweck, 2000)

- **Self-Efficacy**: Belief in one's ability to succeed in specific situations or accomplish a task (Bandura, 1977, 1982, 1986, 1988)

- **Counselor Self-Efficacy**: The belief that one has the ability to perform counseling in a way that will produce particular client outcomes (Melchert, Hays, Wiljanen, & Kolocek, 1996)

- **Burnout**: A prolonged response to chronic emotional and interpersonal stressors on the job comprised of three dimensions: emotional exhaustion, depersonalization, and reduced personal accomplishment (Maslach & Jackson, 1984)
Grit

- An individual’s effort and persistence in overcoming difficulties may lead to the promotion of a more positive mindset and greater self-efficacy (Federici & Skaalvik, 2012)

- Moderate, positive relationship between grit and growth mindset (Duckworth & Eskreis-Winkler, 2013)

- Developing a growth mindset could develop grit (Hochanadel & Finamore, 2015)
Grit

Angela Duckworth
University of Pennsylvania

« Why are some people more successfull than others? »

« Talent is the common answer »

« One characteristic emerged as a significant predictor of success... It was GRIT »

« Many talented individuals do not follow through their commitments »
Mindset

• Implicit Theories – “The view you adopt for yourself”
  – Incremental theory (Growth)
  – Entity theory (Fixed)
• Two response patterns:
  – Mastery-oriented
  – Helpless
• Two types of goals:
  – Learning
  – Achievement

(Dweck, 2006)
Growth vs Fixed Mindset

Michael Jordan

John McEnroe
Self-Efficacy

• Perceptions of self-efficacy are not based solely on the amount of knowledge and skill of a particular how but includes the expectations of how he or she will apply that knowledge and skill in situations (Gündüz, 2012)

• Counselor self-efficacy:
  – Negatively correlated with burnout (Landrum et al., 2012)
  – Negatively correlated with anxiety (Lent, Hill, & Hoffman, 2003)
  – Positively associated with counselor performance (Larson & Daniels, 1998)
  – Positively related to job satisfaction (Federici & Skaalvik, 2012)
Research Questions

1. To what extent does counselor self-efficacy predict reduced burnout?

2. Does mindset and grit affect counselor self-efficacy?

3. To what extent is the relationship between mindset and counselor self-efficacy mediated through grit?
Mediation Model

Proposed mediation process model of the relationships among mindset, grit, counselor self-efficacy, and burnout
Research Design

• Quantitative, online survey method (57 questions)

• 164 surveys started, 148 surveys completed

• 12 included significant missing data and were removed

• N=136 (some analyses N=132 due to missing data)
Instruments

- Demographic Data Questionnaire
- Theory of Intelligence Measure (Mindset)
  - Note: Adapted to reflect counseling skill
- Counselor Activity Self-Efficacy Scale (CASES)
- Professional Quality of Life (ProQOL)
  - Note: Burnout Subscale Only
- Grit-S
Descriptives

Distribution of Response Patterns

• Mindset – Extremely positively skewed
  – 5/132 participants were identified as having a fixed mindset

• Assumption of normality –
  New scores reflect levels of growth mindset
  – 1 – 1.25 = “3” High growth mindset
  – 1.5 – 2.25 = “2” Medium growth mindset
  – 2.5 – 6 = “1” Low Growth Mindset
Growth Mindedness

Distribution of re-categorized levels of growth mindset
Does counselor self-efficacy predict reduced burnout?

After controlling for years of experience, the relationship between counselor self-efficacy and burnout is a moderate-to-strong negative relationship ($r(132) = -0.42$, $p < .001$), indicating that higher self-efficacy is fairly strongly associated with lower burnout scores.
Does mindset and grit affect counselor self-efficacy?

Correlation between mindset and counselor self-efficacy is a small-to-moderate positive relationship ($r(132) = .25, p = .005$)

Correlation between the grit and counselor self-efficacy also indicate a small-to-moderate positive relationship ($r(132) = .22, p = .012$)
To what extent is the relationship between mindset and counselor self-efficacy mediated through grit?

Partial correlation between mindset and counselor self-efficacy (while controlling for grit and years of experience) was conducted.

Correlation was modestly reduced but still significant \( (r(132) = .21, p = .016) \)

Sobel Test - \( (z^\prime = 1.57, p = 0.117) \)  NS
Summary of Results

Full Model

![Diagram showing relationships between mindset, counselor self-efficacy, grit, and burnout with statistical coefficients.](image)
Conclusions

• Vast majority of counselors have a growth-oriented mindset

• Relationship between counselor self-efficacy and burnout supports previous literature

• There is a relationship present between mindset, grit, and counselor self-efficacy
My research process goes more slowly when I have a chair that spins.

\[ L = I \omega \]
\[ a = \omega^2 r = \frac{v^2}{r} \]

WHEEE!
Resilience

- Individual resilience is the ability to withstand, adapt to, and recover from adversity and stress

8 Components of Resilience

• Optimism
• Altruism
• Moral Compass
• Humor
• Social Supports
• Facing Fear
• Purpose in Life
• Training

(Staroverky, 2012)
Lack of Resilience

- Anger
- Sadness or Depression
- Guilt
- Anxiety or Fear
- Embarrassment

These emotions indicate a lack of resilience if they are disproportionate to the event or if the same event triggers the same emotion repeatedly.

Reivich & Shatté (2002)
Increase Resilience

Dispositional optimism
an expectation that more good and desirable things will happen than bad things will happen to us in the future (Scheier and Carver, 1985)

Personal & Social Competence
Social & Emotional Support
Structure

Friborg et al. (2003)
Got Brain Space?

• Zeigarnik effect
  – people remember uncompleted or interrupted tasks better than completed tasks
  – Gestalt: Figure & Ground
Self-Assessment

- GRIT Scale
- Mindset Measure
- Self-Efficacy
- Resiliency Scale
Application & Discussion

• Self-assessment
• Mindset influences grit
• Mindset Matters!
  – Goal Setting
  – Response Pattern
  – Resilience can increase grit
