

Respondus LockDown Browser Update

Re-enable your Respondus LockDown Browser Folder

LockDown Browser

Re-Enable LockDown Browser

A recent update to Respondus LockDown Browser requires that any assessment with Lock-Down Browser already enabled will need to be re-enabled.

1. Go to Assessments in D2L.

Note: Notice the new tab across the top. You should see Manage Quizzes, Question Library, Statistic and now "LockDown Browser"

2. Select the LockDown Browser tab (figure 1.1).

Note: The first time you select LockDown Browser, it will ask you to connect to Respondus' system.

3. The browser will list all assessments in the course. Any that previously had LockDown Browser enabled will say "Error Fix It" to the right of the screen (figure 1.2). Simply select "Fix It" to re-enable LockDown Browser.

Note: LockDown Browser will automatically add text to the title of your assessment. This is required. Removing this text will break the LockDown Browser integration.

Remove LockDown Browser

To remove LockDown Browser from an assessment, or enable a new assessment, select the small icon to the left of the assessment inside the LockDown Browser tab (figure 1.3). Select "Modify Settings".

Use the radial buttons to require or remove the LockDown Browser from the assessment (figure 1.4)
