This course examines the nature, function, and dynamics of love in intimate relationships. Questions addressed include:

- What is love and how did it evolve?
- What attracts people to partners
- What keeps couples together?
- How do cultural manifestations of love vary and influence relationships?
- What are the biological foundations of romantic love?
- How does love change across the life span?
- What is the relationship between sex and love?
- How are jealousy and violence related to love?
