Graph-Story Project

Write a story (narrative) which would create the graph below. Label the graph with a title, scale, and units of measure. Your story should accurately account for <u>each</u> point where there is a change in direction as well as each segment of the graph. Your scale must be consistent. This project is worth 60 points in Ms. Summey's Algebra I class. This assignment is worth 100 points in Ms. Hammonds's English class. Your narrative must make sense and show the elements of a narrative essay. Good luck.
